to every moment, sick of a world where even an orgasm isn't real until it is turned into a tweet. A paragon of old-fashioned American entrepreneurship, Bob sells septic tanks to Jehovah's Witnesses and arranges pyrotechnic displays for foreign dictators. He's also a contract killer for an off-the-books program run by a branch of United States intelligence that targets the elderly, the infirm, and others who drain society of its resources. When a nosy journalist starts asking questions, Bob can't decide if it's a chance to form some sort of new friendship or the beginning of the end for him. With treason on everyone's lips, terrorism in everyone's sights, and American political life sinking to ever-lower standards, Bob decides it's time to make a change—if he doesn't get killed by his mysterious controllers or exposed in the rapacious media first. A thunderbolt of startling images and painted "with a broadly satirical, Vonnegut-ian brush" (Kirkus Reviews), *Bob Honey Who Just Do Stuff* is one of the year's most controversial and talked about literary works.

Explores how computers are reshaping ideas about what it means to be human profiling the annual Turing Test to assess a computer's capacity for thought while analyzing related philosophical, biological, and moral issues.

SOUL OF THE SEA IN THE AGE OF THE ALGORITHM draws upon the fields of science, economics and business strategy to chart the future of humankind's relationship to the ocean. The underlying principle is that a healthy ocean provides the basis for a prosperous world, and that oceans have been largely ignored as a driver of human well-being until now. Ocean health has been in an serious state of decline for the past 100 years from a range of pressures including human population growth, energy consumption and use of natural resources. We will exceed our planetary boundaries, the resources and environmental conditions we need to exist, within the next century if we do not change. This message is not new. What is new about this book is that the solutions lie not only in traditional resource conservation management, but in new fields of technology, governance and innovation.

In *Thrive*, Arianna Huffington makes an impassioned and compelling case for the need to redefine what it means to be successful in today's world. Arianna Huffington's personal wake-up call came in the form of a broken cheekbone and a nasty gash over her eye--the result of a fall brought on by exhaustion and lack of sleep. As the cofounder and editor-in-chief of the Huffington Post Media Group--one of the fastest growing media companies in the world--celebrated as one of the world's most influential women, and gracing the covers of magazines, she was, by any traditional measure, extraordinarily successful. Yet as she found herself going from brain MRI to CAT scan to echocardiogram, to find out if there was any underlying medical problem beyond exhaustion, she wondered is this really what success feels like? As more and more people are coming to realize, there is far more to living a truly successful life than just earning a bigger salary and capturing a corner office. Our relentless pursuit of the two traditional metrics of success--money and power--has led to an epidemic of burnout and stress-related illnesses, and an erosion in the quality of our relationships, family life, and, ironically, our careers. In being connected to the world 24/7, we're losing our connection to what truly matters. Our current definition of success is, as *Thrive* shows, literally killing us. We need a new way forward. In a commencement address Arianna gave at Smith College in the spring of 2013, she likened our drive for money and power to two legs of a three-legged stool. They may hold us up temporarily, but sooner or later we're going to topple over. We need a third leg--a third metric for defining success--to truly thrive. That third metric, she writes in *Thrive*, includes our well-being, our ability to draw on our intuition and inner wisdom, our sense of wonder, and our capacity for compassion and giving. As Arianna points out, our eulogies celebrate our lives very differently from the way society defines success. They don't commemorate our long hours in the office, our promotions, or our sterling PowerPoint presentations as we relentlessly raced to climb up the career ladder. They are not about our resumes--they are about cherished memories, shared adventures, small kindnesses and acts of generosity, lifelong passions, and the things that made us laugh. In this deeply personal book, Arianna talks candidly about her own challenges with managing time and prioritizing the demands of a career and raising two daughters--of juggling business deadlines and family crises, a harried dance that led to her collapse and to her "aha moment." Drawing on the latest groundbreaking research and scientific findings in the fields of psychology, sports, sleep, and physiology that show the profound and transformative effects of meditation, mindfulness, unplugging, and giving, Arianna shows us the way to a revolution in our culture, our thinking, our workplace, and our lives.

"Zade Holder has always been a free-spirited young woman, from a long dynasty of tarot-card readers, fortunetellers, and practitioners of magick. Growing up in a small town and never quite fitting in, Zade is determined to forge her own path. She leaves her home in Tennessee to break free from her overprotective mother Dela, the local resident spellcaster and fortuneteller. Zade travels to Las Vegas and uses supernatural powers to become part of a premiere magic show led by the infamous magician Charles Spellman. Zade fits right in with his troupe of artists and misfits. After all, when everyone is slightly eccentric, appearing 'normal' is much less important. Behind the scenes of this multimillion-dollar production, Zade finds herself caught in a love triangle with Mac, the show's good-looking but rough-around-the-edges technical director and Jackson, the tall, dark, handsome and charming bandleader. Zade's secrets and the struggle to choose between Mac or Jackson creates reckless tension during the grand finale of the show. Using Chaos

magick, which is known for being unpredictable, she tests her abilities as a spellcaster farther than she's ever tried and finds herself at death's door. Her fate is left in the hands of a mortal who does not believe in a world of real magick, a fortuneteller who knew one day Zade would put herself in danger and a dagger with mystical powers"--Amazon.com

A man, a woman, a child, and an unforgettable dog combine forces in this gripping and surprising psychological thriller, the most stunning novel yet from Scott Spencer—named one of Publishers Weekly's Top Ten Books of 2010. Can we ever get away with murder? Are there secrets that cannot remain hidden no matter how deeply we try to bury them? And do the things we hide control our destinies even more than the things we choose to reveal? Paul Phillips has been on his own since he was a teenager, leading a life of freedom and independence, beholden to no one and nothing. Once he thought his life would have no particular rhyme or reason, touched only by transient strangers. Then he met the beautiful, intelligent, loving Kate Ellis, who offered order and constancy. But Paul is a man of deep convictions, and the compromises we all make to get along in the world elude him. On his way home after a particularly trying day, Paul discovers a man beating a dog, and in a few fateful moments is plunged into a world of violence and onto a tumultuous journey of self-knowledge, guilt, and redemption.

Algorithms will soon know more about us than we know ourselves Where should machine automation end? Is it acceptable to have a digital assistant arrange your calendar, but not to have a robot spouse? Are companion robots acceptable for seniors in need of comfort, but not okay for toddlers exposed to emotional software that could influence their behavior? Is it desirable to live a life within the virtual reality of Facebook's Oculus Rift, but not if your thoughts are sold to advertisers who manipulate your purchases? We've entered an era where a myriad of personalization algorithms influence our every decision, and the lines between human assistance, automation, and extinction have blurred. We need to create ethical standards for the Artificial Intelligence usurping our lives, and allow individuals to control their identity based on their values. Otherwise, we sacrifice our humanity for productivity versus purpose and for profits versus people. Featuring pragmatic solutions drawing on economics, emerging technologies, and positive psychology, Heartificial Intelligence provides the first values-driven approach to algorithmic living—a definitive roadmap to help humanity embrace the present and positively define their future. Each chapter opens with a fictional vignette, helping readers imagine how they would respond to various Artificial Intelligence scenarios while demonstrating the need to codify their values, as the algorithms dominating society today are already doing. Funny, poignant, and accessible, this book paints a vivid portrait of how our lives might look in either a dystopia of robotic and corporate dominance, or a utopia where humans use technology to enhance our natural abilities to evolve into a long-lived, super-intelligent, and altruistic species.

An empowering and celebratory portrait of Black women—from Josephine Baker to Aunt Viv to Cardi B. "Powerful... Calling for Black women (in and out of the public eye) to be treated with empathy, Blay's pivotal work will engage all readers, especially fans of Mikki Kendall's Hood Feminism." —Kirkus (Starred) In 2013, film and culture critic Zeba Blay was one of the first people to coin the viral term #carefreeblackgirls on Twitter. As she says, it was "a way to carve out a space of celebration and freedom for Black women online." In this collection of essays, Carefree Black Girls, Blay expands on this initial idea by delving into the work and lasting achievements of influential Black women in American culture—writers, artists, actresses, dancers, hip-hop stars—whose contributions often come in the face of bigotry, misogyny, and stereotypes. Blay celebrates the strength and fortitude of these Black women, while also examining the many stereotypes and rigid identities that have clung to them. In writing that is both luminous and sharp, expansive and intimate, Blay seeks a path forward to a culture and society in which Black women and their art are appreciated and celebrated.
