FFA is a condition which causes hair loss, mainly over the hairline at the front of your head. It is a type of alopecia known as 'scarring alopecia' or 'cicatricial alopecia'. It is thought to be related to another condition called lichen planus which, when it affects the scalp, is called

Dermatology Department Frontal Fibrosing Alopecia

Women with frontal fibrosing alopecia (FFA) note a rapid onset of frontal hair recession. This recession usually includes the temporal hairline; however, the emergence of hair loss can be subtle and slowly progressive. A useful clue to the diagnosis is frequently the loss of eyebrows, a loss that can precede the frontal recession.

Frontal Fibrosing Alopecia - Dermatology Advisor

Frontal fibrosing alopecia usually presents as a uniform linear band of hair loss along the front and sides of the scalp hair margin, resulting in a receding frontal hair line. Atypical patterns of loss include a diffuse zig-zag pattern, a pseudo-fringe- sign , or continuous involvement all the way around the hair margin both front and back.

Frontal fibrosing alopecia | DermNet NZ

Frontal fibrosing alopecia is characterized by a frontal or frontotemporal symmetric band of alopecia, although several additional clinical features can be observed, such as loss of eyebrows and eyelashes, hair loss from the extremities or the face, depression of frontal and temporal veins, glabellar red dots, pigmented skin patches, lichenoid alterations of mucosae and nails, 1 and yellow facial papules. 3-5 Medications, such as topical and intralesional corticosteroids, topical calcineurin ...

Frontal fibrosing alopecia: efficacy of treatment modalities.

Frontal fibrosing alopecia (FFA) is a form of lymphocytic cicatricial alopecia that presents as frontotemporal hairline recession, typically in postmenopausal women. 1 The condition is considered to be a variant of lichen planopilaris (LPP) due to its similar histologic appearance. 2 Loss of eyebrow 1-11 and body 5-11 hair also is commonly present in FFA, and histologic findings are identical to those for hair loss on the scalp, 8,9 suggesting that FFA may be a form of generalized alopecia.

Frontal Fibrosing Alopecia Demographics: A Survey of 29 ...

• Typically occurs on the frontotemporal region of the scalp, but upper periauricular and occipital localization are not uncommon • The band of alopecia is often readily distinguishable from the sun damaged skin of the forehead • Most common in postmenopausal women, but 15% of cases occur in younger; may occur in men • Usually presents in patients who are between 55 and 65 years of age

FRONTAL FIBROSING ALOPECIA - secdermsmeeting.org

Abstract Frontal fibrosing alopecia (FFA) is a primary lymphocytic cicatricial alopecia that is currently regarded as a variant of lichen planopilaris. FFA has historically been considered rare in black patients, in whom traction alopecia, central centrifugal cicatricial alopecia, and androgenetic alopecia are frequently assumed to be more common.

Background: Frontal fibrosing alopecia (FFA) is a chronic cicatricial alopecia with an increasing incidence and unknown aetiology. Aim: To identify possible environmental and hormonal factors related to FFA. Methods: We conducted a multicentre case-control study paired by sex and age, and recruited 664 women (335 cases and 329 controls) and 106 men (20 cases and 86 controls).

Risk factors associated with frontal fibrosing alopecia: a ...

Abstract There are few reports of the association between Frontal Fibrosing Alopecia (AFF) and lupus. Lupus erythematosus is a recurrent chronic disease accompanied by acute, subacute and chronic lesions. Telogen Effluvium occurs as part of the systemic activity of the disease, and scarring alopecia results from discoid lesions on the scalp.

Association of lupus and a frontal fibrosing alopecia: A ...

Frontal fibrosing alopecia is a form of scarring hair loss that affects the hair margin on the front of the scalp. This condition causes the frontal hairline to progressively recede over time. The rate of hair loss varies from person to person. Once the hair falls out, it will not re-grow in the area.
